

FCC CFR47 PART 15 SUBPART C (15.249)  
CERTIFICATION  
TEST REPORT

FOR

Lamax Group Co., Ltd.

2.4G Wireless Mice

Model No.: LMM-8068

Prepared for : Lamax Group Co., Ltd.  
Address : Floor 18C, Block 3B, Jinhong Kaixuan City, Bao'an District, Shenzhen,  
China

Prepared by : SHENZHEN LCS COMPLIANCE TESTING LABORATORY LTD.  
Address : Xingyuan Industrial Park, Tongda Road, Bao'an Blvd., Bao'an District,  
Shenzhen, Guangdong, China

Report Number : LCS1109192387F  
Date of Test : September 19, 2011 - September 29, 2011  
Date of Report : September 29, 2011

# **TEST REPORT** **FCC CFR 47 PART 15 C(15.249)**

**Report Reference No. .... : LCS1109192387F**

Date of issue..... : September 29, 2011

**Testing Laboratory Name ..... : Shenzhen LCS Compliance Testing Laboratory Ltd.**

Address..... : Xingyuan Industrial Park, Tongda Road, Bao'an Blvd., Bao'an District, Shenzhen, Guangdong, China

Testing location/ procedure..... : Full application of Harmonised standards ☒  
Partial application of Harmonised standards ☐  
Other standard testing method ☐

**Applicant's name..... : Lamax Group Co., Ltd.**

Address..... : Floor 18C, Block 3B, Jinhong Kaixuan City, Bao'an District, Shenzhen, China

## **Test specification**

Standard..... : FCC CFR 47 PART 15 Subpart C: 2011, ANSI C63.4-2009

**Test Report Form No. .... : LCSEMC-1.0**

TRF Originator..... : Shenzhen LCS Compliance Testing Laboratory Ltd.

Master TRF ..... : Dated 2011-03

## 1. GENERAL INFORMATION

### 1.1. Description of Device (EUT)

|              |                      |
|--------------|----------------------|
| EUT          | : 2.4G Wireless Mice |
| Model Number | : LMM-8068(TX)       |
| Power Supply | : DC 5V              |

### 1.2. Description of Test Facility

|                  |   |
|------------------|---|
| Site Description |   |
| EMC Lab.         | : Accredited by CNAS, June 04, 2010<br>The Certificate Registration Number. is L4595.<br>Accredited by FCC, July 14, 2011<br>The Certificate Registration Number. is 899208.<br>Accredited by Industry Canada, May. 02, 2011<br>The Certificate Registration Number. is 9642A-1 |

### 1.3. Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. To CISPR 16 – 4 “Specification for radio disturbance and immunity measuring apparatus and methods – Part 4: Uncertainty in EMC Measurements” and is documented in the LCS quality system acc. To DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

### 1.4. Measurement Uncertainty

| Test Item              |   | Frequency Range | Uncertainty         | Note |
|------------------------|---|-----------------|---------------------|------|
| Radiation Uncertainty  | : | 30MHz~200MHz    | $\pm 2.96\text{dB}$ | (1)  |
|                        | : | 200MHz~1000MHz  | $\pm 3.10\text{dB}$ | (1)  |
| Conduction Uncertainty | : | 150kHz~30MHz    | $\pm 1.63\text{dB}$ | (1)  |
| Power disturbance      | : | 30MHz~300MHz    | $\pm 1.60\text{dB}$ | (1)  |

(1). This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

## 2. TEST METHODOLOGY

All measurements contained in this report were conducted with ANSI C63.4-2003, American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the range of 9 kHz to 40 GHz.

The radiated testing was performed at an antenna-to-EUT distance of 3 meters. All radiated and conducted emissions measurement was performed at Shenzhen LCS Compliance Testing Laboratory Ltd..

### 2.1. EUT Configuration

The EUT configuration for testing is installed on RF field strength measurement to meet the Commissions requirement and operating in a manner that intends to maximize its emission characteristics in a continuous normal application.

### 2.2. EUT Exercise

The EUT was operated in the engineering mode to fix the TX frequency that was for the purpose of the measurements.

According to its specifications, the EUT must comply with the requirements of the Section 15.203, 15.205, 15.207, 15.209 and 15.249 under the FCC Rules Part 15 Subpart C.

### 2.3. General Test Procedures

#### 2.3.1 Conducted Emissions

The EUT is placed on the turntable, which is 0.8 m above ground plane. According to the requirements in Section 13.1.4.1 of ANSI C63.4 Conducted emissions from the EUT measured in the frequency range between 0.15 MHz and 30MHz using Quasi-peak and average detector modes.

#### 2.3.2 Radiated Emissions

The EUT is placed on a turn table, which is 0.8 m above ground plane. The turntable shall rotate 360 degrees to determine the position of maximum emission level. EUT is set 3m away from the receiving antenna, which varied from 1m to 4m to find out the highest emission. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical. In order to find out the maximum emissions, exploratory radiated emission measurements were made according to the requirements in Section 13.1.4.1 of ANSI C63.4

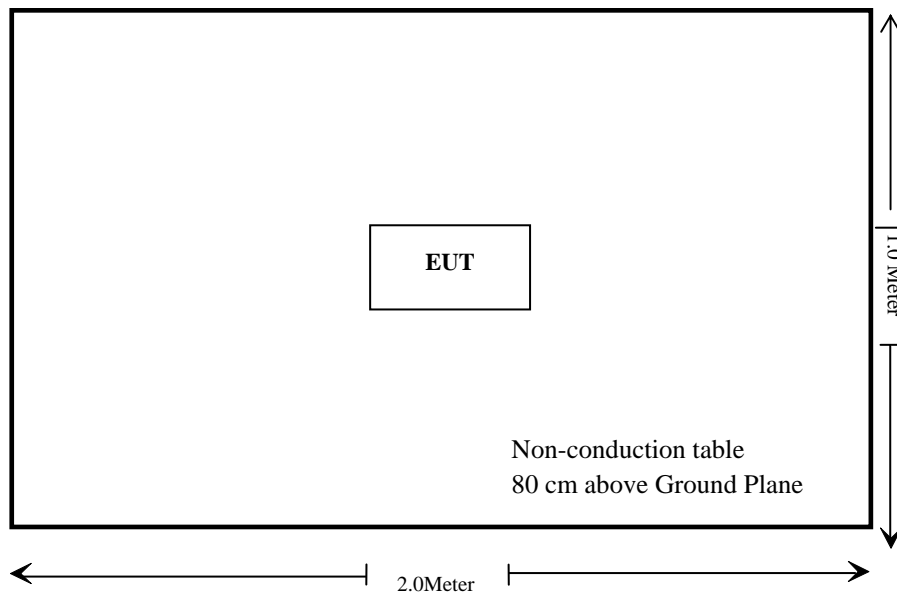

### 2.4. Description Of Test Modes

The EUT has been tested under operating condition.

After verification, all tests were carried out with the worst case test modes as shown below except radiated spurious emission below 1GHz, which worst case was in normal link mode only.

Then, the worst case is FSK, these were chosen for full testing.

### 3. CONNECTION DIAGRAM OF TEST SYSTEM

### 4. SUMMARY OF TEST RESULTS

| FCC RULES                                       | DESCRIPTION OF TEST   | RESULT     |
|---|-----------------------|------------|
| §15.203   | Antenna Requirement   | Compliant  |
| §15.207(a)                                      | Conduction Emissions  | N/A        |
| §15.205(a)§15.209(a),<br>§15.249(a), §15.249(c) | Radiated Emissions    | Compliant* |
| §15.249(d)                                      | Out of band emissions | Compliant  |
| §15.249   | Band Edges emissions  | Compliant  |

\* Within the measurement uncertainty.

## 5. §15.203 ANTENNA REQUIREMENT

### 5.1. Standard Applicable

According to §15.203, Antenna requirement.

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the re-sponsible party shall be used with the device. The use of a permanently attached antenna or of an an-tenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that a broken antenna can be re-placed by the user, but the use of a standard antenna jack or electrical connector is prohibited. This re-quirement does not apply to carrier current devices or to devices operated under the provisions of Sec-tions 15.211, 15.213, 15.217, 15.219, or 15.221. Further, this requirement does not apply to intentional radiators that must be professionally installed, such as perimeter protection systems and some field dis-turbance sensors, or to other intentional radiators which, in accordance with Section 15.31(d), must be measured at the installation site. However, the installer shall be responsible for ensuring that the proper antenna is employed so that the limits in this Part are not exceeded.

### 5.2. Antenna Connected Construction

The directional gains of antenna used for transmitting is 1.5dBi, and the antenna connector is de-signed with permanent attachment and no consideration of replacement. Please see EUT photo for details.

Result: Compliance.

## 6. §15.205 §15.209(A) §15.249(A) §15.249(C) - RADIATED EMISSIONS

### 6.1. Limit

20dBc in any 100 kHz bandwidth outside the operating frequency band. In case the emission fall within the restricted band specified on 15.205(a), then the 15.209(a) limit in the table below has to be followed.

| Frequencies (MHz) | Field Strength (micorvolts/meter) | Measurement Distance (meters) |
|-------------------|-----------------------------------|-------------------------------|
| 0.009~0.490       | 2400/F(KHz)                       | 300                           |
| 0.490~1.705       | 24000/F(KHz)                      | 30                            |
| 1.705~30.0        | 30                                | 30                            |
| 30~88             | 100                               | 3                             |
| 88~216            | 150                               | 3                             |
| 216~960           | 200                               | 3                             |
| Above 960         | 500                               | 3                             |

### 6.2. Measuring Instruments and Setting

Please refer to section 5 of equipments list in this report. The following table is the setting of spectrum analyzer and receiver.

| Spectrum Parameter                        | Setting  |
|---|--|
| Attenuation                               | Auto   |
| Start Frequency                           | 1000 MHz                                       |
| Stop Frequency                            | 10th carrier harmonic                          |
| RB / VB (Emission in restricted band)     | 1MHz / 1MHz for Peak, 1 MHz / 10Hz for Average |
| RB / VB (Emission in non-restricted band) | 1000KHz / 1000KHz for peak                     |

| Spectrum Parameter     | Setting                          |
|------------------------|----------------------------------|
| Attenuation            | Auto                             |
| Start ~ Stop Frequency | 9kHz~150kHz / RB 200Hz for QP    |
| Start ~ Stop Frequency | 150kHz~30MHz / RB 9kHz for QP    |
| Start ~ Stop Frequency | 30MHz~1000MHz / RB 120kHz for QP |

### 6.3. Test Procedures

1. Configure the EUT according to ANSI C63.4. The EUT was placed on the top of the turntable 0.8 meter above ground. The phase center of the receiving antenna mounted on the top of a height-variable antenna tower was placed 3 meters far away from the turntable.
2. Power on the EUT and all the supporting units. The turntable was rotated by 360 degrees to determine the position of the highest radiation.
3. The height of the broadband receiving antenna was varied between one meter and four meters above ground to find the maximum emissions field strength of both horizontal and vertical polarization.
4. For each suspected emissions, the antenna tower was scan (from 1 m to 4 m) and then the turntable was rotated (from 0 degree to 360 degrees) to find the maximum reading.
5. Set the test-receiver system to Peak or CISPR quasi-peak Detect Function with specified bandwidth under Maximum Hold Mode.
6. For emissions above 1GHz, use 1MHz VBW and RBW for peak reading. Then 1MHz RBW and 10Hz VBW for average reading in spectrum analyzer.
7. When the radiated emissions limits are expressed in terms of the average value of the emissions, and pulsed operation is employed, the measurement field strength shall be determined by averaging over one complete pulse train, including blanking intervals, as long as the pulse train does not exceed 0.1 seconds. As an alternative (provided the transmitter operates for longer than 0.1 seconds) or in cases where the pulse train exceeds 0.1 seconds, the measured field strength shall be determined from the average absolute voltage during a 0.1 second interval during which the field strength is at its maximum value.
8. If the emissions level of the EUT in peak mode was 3 dB lower than the average limit specified, then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions which do not have 3 dB margin will be repeated one by one using the quasi-peak method for below 1GHz.
9. For testing above 1GHz, the emissions level of the EUT in peak mode was lower than average limit (that means the emissions level in peak mode also complies with the limit in average mode), then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions will be measured in average mode again and reported.

### 6.4. Test Equipment List and Details

| Item | Test Equipment    | Manufacturer    | Model No. | Serial No.   | Last Cal. |
|------|-------------------|-----------------|-----------|--------------|-----------|
| 1    | EMI Test Receiver | ROHDE & SCHWARZ | ESCI      | 1166.5950.03 | 2011/06   |
| 2    | Amp               | HP              | 8449B     | 3008A00863   | 2011/06   |

## 7. §15.249(D) – OUT OF BAND EMISSIONS

### 7.1. Limit

Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in §15.209, whichever is the lesser attenuation.

### 7.2. Test Procedures

- 7.2.1 Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.
- 7.2.2 Position the EUT without connection to measurement instrument. Turn on the EUT and connect its antenna terminal to measurement instrument via a low loss cable. Then set it to any one measured frequency within its operating range, and make sure the instrument is operated in its linear range.
- 7.2.3 Set the RBW to 1 MHz and VBW of spectrum analyzer to 3 MHz for PK Detector, Set the RBW to 1 MHz and VBW of spectrum analyzer to 10 Hz for AV Detector with a convenient frequency span including the specified frequencies of band edges.
- 7.2.4 Measure the highest amplitude appearing on spectral display and set it as a reference level. Plot the graph with marking the highest point and edge frequency.
- 7.2.5 Repeat above procedures until all measured frequencies were complete.

### 7.3. Test Equipment List and Details

| Item | Test Equipment    | Manufacturer    | Model No. | Serial No.   | Last Cal. |
|------|-------------------|-----------------|-----------|--------------|-----------|

Remarks: 1. Emission Level= Antenna Factor + Cable Loss + Reading.  
 2. The emission levels that are 20dB below the official limit are not reported.

## 8. §15.249 BAND EDGES MEASUREMENT

### 8.1. Limit

According to §15.247(c), in any 100 kHz bandwidth outside the frequency bands in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a).

### 8.2. Test Equipment

| Equipment         | Manufacturer  | Model No. | Serial No. | Last Cal. | Cal. Interval |
|-------------------|---------------|-----------|------------|-----------|---------------|
| Spectrum Analyzer | Anritsu       | MS2661C   | 6200140915 | 2011-06   | 1 Year        |
| Test Receiver     | Rohde&Schwarz | ESCS30    | 828985/018 | 2011-06   | 1 Year        |
| Antenna           | Schwarzbeck   | VULB9163  | 142        | 2011-06   | 1 Year        |
| Horn-antenna      | Schwarzbeck   | BBHA9120D | D:266      | 2011-06   | 1 Year        |
| DC Filter         | MPE           | 23872C    | N/A        | 2011-06   | 1 Year        |

### 8.3. Block Diagram of Test Setup

### 8.4. Test Procedure

The EUT is placed on a turntable, which is 0.8m above the ground plane. The turntable shall be rotated for 360 degrees to determine the position of maximum emission level.

EUT is set 3m away from the receiving antenna, which is varied from 1m to 4m to find out the highest emission. Set the spectrum analyzer in the following setting in order to capture the lower and upper band-edges of the emission:

Peak: RBW=VBW=1MHz / Sweep=AUTO

Repeat the procedures until the peak versus polarization are measured.

## 8.5. Test Results

## Remarks:

1. Emission Level= Antenna Factor + Cable Loss -Amp Factor + Reading.
2. The emission levels that are 20dB below the official limit are not reported.

9. MANUFACTURER/ APPROVAL HOLDER DECLARATION

The following identical model(s):

|    |    |    |
|----|----|----|
| -- | -- | -- |
|----|----|----|

Belong to the tested device:

Product description : 2.4G Wireless Mice  
Model name : LMM-8068

No additional models were tested.
